

Jake Joyner

Los Angeles, CA · jake@jakejoyner.com · github.com/jakejjoyner · ailedger.dev

Engineer and founder, building tamper-evident audit infrastructure for AI inference. Strongest in Rust, edge compute, cryptographic provenance, and EU AI Act compliance. Currently solo on AILedger; in early customer conversations.

SELECTED WORK

AILedger — Founder

2025-present · ailedger.dev

Tamper-evident chain of custody for every AI inference an enterprise's product makes, designed for the EU AI Act Article 12 conformance question (Article 79 enforcement August 2, 2026).

- Cloudflare Workers proxy with input/output SHA-256 hashing and RFC 8785 JCS canonicalization
- Per-tenant audit chain with deterministic verification path
- Customer discovery underway with EU-exposed enterprise AI teams

skillrt — Rust, published

crates.io/crates/skillrt

Skill-runtime primitive for AI agents: portable skill-pack format, dynamic loading, dispatch.

matrixrt — Internal runtime

2026

Dynamic task→skill matching runtime. Coverage-based scoring with ϵ -greedy exploration; outcomes update per-skill priors over an append-only ledger. Designed for high-throughput operation.

Multi-silo collaboration infrastructure — Internal

2026

Cross-agent work isolation, audit logging, and signaling layer (Plaza / Border / Overseer pattern). Built on Python stdlib, tailscale, and systemd user units.

EARLIER EXPERIENCE

Transfer Research Experience (T-REX), UC San Diego

August 2025

Paired with faculty mentor; studied optimization techniques in modern machine learning. Presented research poster.

Restoration Technician, True West Motorworks

2025

Diagnostics, engine repair, and spot welding on neglected vehicles, primarily air-cooled VWs.

EDUCATION

University of California, San Diego

September 2025 – April 2026 (departed)

Mathematics / Computer Science · Member, IEEE-Eta Kappa Nu (HKN) · Departed to focus full-time on AILedger.

Coursework: abstract algebra, combinatorics, extremal graph theory.

Santa Monica College

February 2023 – June 2025

Computer Science · 3.9 GPA · Scholars Program · Dean's List

TECHNICAL SKILLS

Languages: Rust · TypeScript · Python · Go · JavaScript · C/C++ · SQL · Java

Infrastructure: Cloudflare Workers · edge compute · audit-trail systems · cryptographic provenance (SHA-256, RFC 8785 JCS) · AI inference middleware · PostgreSQL · SQLite · Docker

Frontend: React · HTML / CSS

Tools: Linux · Vim · Git · LaTeX · OpenGL

Domain knowledge: EU AI Act (Articles 12 & 79) · tamper-evident logging · AI inference observability · compliance infrastructure
